

Arc Flash Safety And NEC

A Maintenance and Engineering Training Seminar

Industrial Training, Inc., provides expert, licensed electricians to deliver an Arc Flash Seminar designed for commercial and industrial application. In order to offer a greater return on your training investment, our instructor presents each topic in an organized format with specific objectives in mind. A typical course outline for this seminar is as follows:

- NFPA 70E
 - Introduction
 - Review of Article 130
 - Use of Index
 - 130.1 Justification for Work
 - 130.1A Energized Electrical Work Permit
 - 130.2 Approach Boundaries
 - 130.4 Test Instruments and Equipment
 - 130.5 Work on or near Uninsulated Overhead Lines
 - 130.6 Other Precautions for Personnel Activities
 - 130.7 Personal and Other Protective Equipment
- Electrical Safety Program Book Review
- NEC Review
 - Use of Index
 - Basic Calculations

What sets Industrial Training, Inc. apart from other training options?

- Training is geared toward individual capability.
- Training ranges from the basics for the beginner, to advanced training to aid your current technicians in working with new assets and technologies.
- Our goal is to give your maintenance personnel the training they need to troubleshoot and maintain the equipment to reduce costly downtime.
- We wrap up the world-class training with a quiz to assess effectiveness.

The Mark Standifer Story: Lessons Learned From An Arc Flash Tragedy video is used to supplement training.
